

CHEYENNE CONNECTOR OCTOBER 2023 MAINTENANCE SCHEDULE

Cheyenne Connector does not have any scheduled maintenance affecting capacity for October 2023. Please monitor Cheyenne Connector's EBB for any revisions to this posting.

In the event Cheyenne Connector cannot schedule the firm service nominations from Primary Receipt to Primary Delivery on a Day, Reservation Charge Credit Quantities are calculated pursuant to Section 7.14, D, 2, a, and are based upon a firm shipper's average daily usage at Primary Points during the seven (7) complete Gas Days prior to the day Cheyenne Connector posts the Monthly Maintenance Schedule, except where the 7-Day period is limited by pre-existing firm service curtailments pursuant to Section 7.14, D, 2, d.

To the extent there is a limitation to scheduling or curtailment of firm service nominations, available pipeline capacity will be scheduled first to firm transportation nominations from Primary Receipt Points to Primary Delivery Points and along Primary Paths and remaining capacity will be scheduled pro rata based on nominations and consistent with Section 3.1 of the General Terms and Conditions of the Cheyenne Connector FERC Gas Tariff.
